

Gas Meter Exchange Programme

United Utilities

Lancashire, North Wales, South Lakes Area

Term: 8 years

Value: £90m

The Gas Meter Exchange Programme is for the whole of United Utilities' operational area, which requires the replacement of up to 900 gas meters per day.

Morrison are responsible for the supply chain management of new and replacement meters, along with the disposal / recycling of replaced meters. All Morrison vehicles are fitted with GPS satellite navigation systems, storage for both new and old meters and a PSION PDA management tool for updating whilst on the road.

Morrison's specialist IS team has developed bespoke metering management software and has worked with the designers of the scheduling system to improve and streamline systems to enable improved data flow between ourselves and United Utilities.

Our capability for gas installations in the North consists of over 120 gas meter engineers, with additional personnel being trained to join the team.

Morrison also undertakes construction of new connections work within the Lancashire / South Lakes area for United Utilities Networks Division.
